TechCo Code Review Policy

Pull Requests

Every change reaches the main branch through a pull request.

A pull request needs 1 approval before merging, and 2 approvals if it changes payments code.

Keep pull requests under 400 lines so reviewers can read them carefully.

Create a new branch with git checkout -b followed by the ticket number.

Reviewing

Reviewers respond to a pull request within 24 hours on working days.

Comments marked nit are optional suggestions and do not block merging.

The author, not the reviewer, merges the pull request after approval.

Testing and Deployment

All tests in the CI/CD pipeline must pass before a pull request can be merged.

New features need unit tests, and bug fixes need a test that reproduces the bug.

We deploy to production every Tuesday and Thursday; no deployments happen on Fridays.

Every list rendered in React needs a unique key so the interface updates correctly.
